

Aviation Commercial Standard Leather

Made to Specification Commercial Airline Upholstery Leather

Average Hide Size: 50 s.f.

Average Thickness: 1.1 - 1.2 mm

Average Weight: 2.75 - 3.0 oz.

Our mission is to provide airlines with high-performance, stain-resistant leather with a highly-refined aesthetic. The commercial aviation "made to specification" leathers are both beautiful and economical leathers that pass stringent flammability and technical requirements. The commercial aviation leathers are chromium-tanned and flame-treated in the drum. These leathers are treated with a highly durable and protective water-based polyurethane; solvent-free finish.

Please note that the colors listed are just a sampling. Aviation leather can be made in the color and texture of your choosing.
