New Forest

Smooth, Lightly Distressed

Average Hide Size: 45 - 48 s.f.

Average Thickness: 1.0 mm

Average Weight: 2.75 oz.

The New Forest collection is a lightly distressed, smooth luxury leather, with a laser-cut counterpart in matching colors. Because of the pure aniline dyes used in the finishing process, the overall color of this product appears slightly two-toned and varied. New Forest's subtle sheen provides excellent protection. With its exceptionally soft hand, this product is the perfect solution when both luxury and durability are required.

New Forest is color-coordinated with New Forest Rose.

54-1 Ermellino

54-2 Spiaggia

54-3 Cipolla

New Forest Rose

Laser-cut Rose Pattern

Average Hide Size: 24 s.f.

Average Thickness: 1.0 mm

Average Weight: 2.75 oz.

The only laser-cut leather (as opposed to suede) in the line, Rose is available in the three New Forest colors. The distinctive rose pattern is etched into the hide with a laser beam. Even more remarkable is the stop-perforation in the spaces among the rose petals. Although the leather appears completely perforated, the perforation does not cut through the entire thickness of the hide, so that the leather retains its tensile strength. In addition, the substrate will not show through the holes.

Available in half hides only.

New Forest Rose is color-coordinated with New Forest.
